thanks for the reply,

my treg 3.0 has already installed an auxiliary heater,

I changed the heater because I installed one functioning: auxiliary heating the vehicle is stationary.

this way I can control it from the original compass module, and the original transmitter vw,

Why did you change the heater? The heater should be the same, you just need something to control the heater to heat without ignition.

Which heater did you install? Was it an original Touareg heater, or a Webasto OEM?
