

TV / DVD während der Fahrt

Beitrag von „jonee“ vom 25. Mai 2004 um 13:21

Sorry for my post being in English but my German writing isn't good enough (I can read it however).

Andy from Ross-Tech (company that makes VAG-COM) told me they tried connecting a new CAN BUS adaptor (not available for sale yet) to the Touareg's OBD2 port, but without luck.

I did quite a bit of research on the Can Bus.

The Touareg uses the CAN-BUS but does NOT support can bus diagnosis over the OBD2 port, only K-Line. So I guess this method to play video while driving won't work.

I am however also looking for methods to do this. According to some guys at vwvortex, the only solution will be to reprogram the firmware in the navi. But that is far from easy. Are there guys overhere that know a lot about disassembling programs?

If you would find another way, I would be extremely thankful!
