Thanks for the links.

Yes, I think the Pioneer solution could be an idea for DVD, MP3, TV (Navi: EU on one DVD!):

[http://www.pioneer-eur.com/eur/product\\_de...onomy\\_id=25-112](http://www.pioneer-eur.com/eur/product_de...onomy_id=25-112)

But what I'm really looking for is a "mobil office". As my company uses Microsoft tools, I have to be able to use the MS Office suite. Although I'd like Linux better (even with an emulation of a windows pc).

So, my plan is to build a small size pc (boards by Shuttle or Epox, etc) with flash memory card and water cooling (no moving aprts) as stability and reliability are very important.

Or to use a special pc (LCD screen with built-in pc).

But it must not disturb me when I'm driving. And I don't like the look of a solution like this:

What's your opinion?
